## CCP-CG "Coil Guards"

### Standard Features:

- .063" PVC coated wire mesh "black", 1/2" sq. grid pattern.
- "KMC-clamps" with fasteners provided loose for field installation, 1 per 10"-12" of linear perimeter.

Type A

### Optional Features:

1. Magnetic "Magna-Mount" clips for locations where the coil is located behind the intended installation surface where coil penetration may occur. (more costly)
2. Unit submittal details reviewed by Complete Curb Products to determine "suggested" sizing & type of anchors. (detailed unit submittal drawings are required).

### NOTES:

It is suggested coil guards be sized at least 2"-3" greater, L" x W", than the exposed coil size.

The unit should be carefully reviewed prior to installation of the guards, to avoid coil penetration/damage. The installing party is responsible for any damage to the coil upon installation.
