CCP-SBPC
Solid Bottom Package Curb

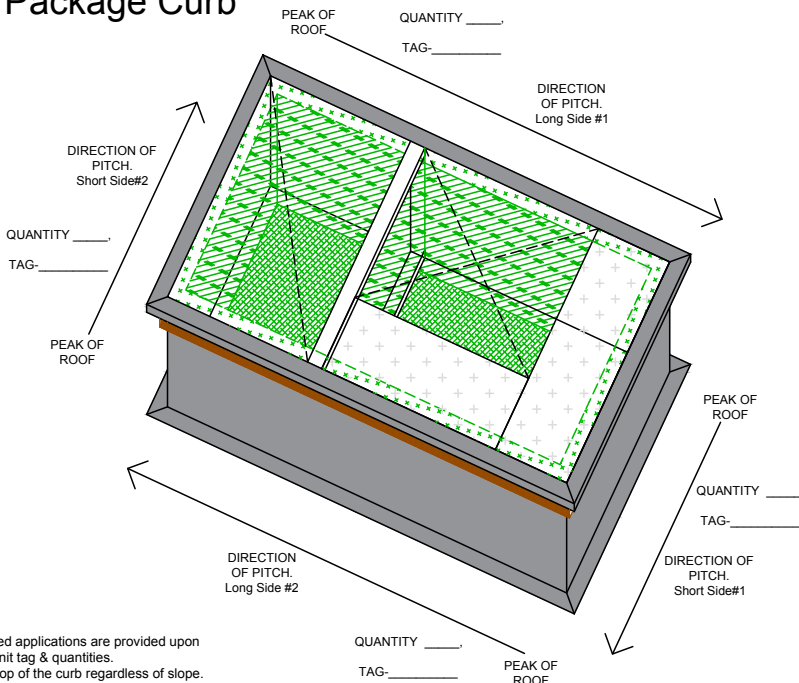

Standard Features:

- 18ga. G90 min. construction.
- 14"-18" Min. height.
- 1"x4" wood nailer installed under the top mounting surface for roofing material termination.
- Divider walls tack welded in.
- 20ga. solid bottom panel/s tack welded & hard-cast seal, for installing contractor to field cut base opening/s as needed.
- Top condenser panel is insulated & screwed on, when required.
- Continuous welded seams coated with corrosion inhibiting compound.
- 2" base mounting flanges all 4 sides.
- 1/4" x 1 1/2" neoprene gasket material supplied loose for field installation prior to unit installation.

Optional Features:

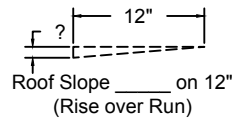

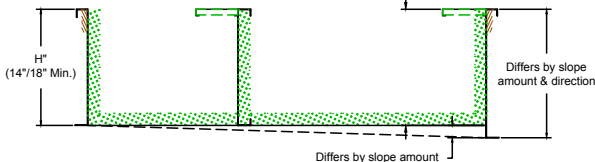

1. Pitched for sloped roof application.
2. Heavy gauge galvanized steel.
3. Aluminum construction.
4. Stainless Steel, 304-2B construction.
5. Pressure Treated wood nailer.
6. Extended base flanges (specify size).

Note: For curbs exceeding 24" in height, the gauge of construction must be increased.

Custom detailed submittal drawings for sloped applications are provided upon receiving the slope amount & direction per unit tag & quantities.
The insulated solid bottom is level from the top of the curb regardless of slope.

H" to solid bottom, Regardless of slope amount or direction.
