MEET FARM FOUNDATION

A 501(C)(3) NON-PROFIT AT THE INTERSECTION OF AGRICULTURE AND SOCIETY
Farm Foundation is an **ACCELERATOR** of practical solutions for agriculture.

We accelerate **PEOPLE AND IDEAS** into **ACTION**.
OUR MISSION AND VISION
GUIDE OUR WORK

MISSION:
To build trust and understanding at the intersections of agriculture and society.

VISION:
To build a future for farmers, our communities, and our world.

DIETARY HEALTH CRISIS IN AMERICA

• Only 1 in 10 Americans consumes the recommended minimum daily servings of fruit and vegetables
• Meat consumption exceeds healthy levels by 20–60 %
• Too much ultra-processed food, with added sugar, salt, and fat
• 42 percent of adults clinically obese, three times the level of the 1960s
• Obesity contributes to 300,000 deaths every year from diabetes, cardiovascular disease, and cancers
Adult Obesity in the United States

Figure 4. Trends in age-adjusted obesity and severe obesity prevalence among adults aged 20 and over: United States, 1999–2000 through 2017–2018

NOTES: Estimates were age adjusted by the direct method to the 2000 U.S. Census population using the age groups 20–39, 40–59, and 60 and over. Access data table for Figure 4 at: https://www.cdc.gov/nchs/data/databriefs/db380_tables-008.pdf#4.

Poor Dietary Health From Farm Subsidies?

• “[W]e create incentives for our farmers to grow huge quantities of corn and soy, mostly in the Midwest...Corn and soy is really where the calories in most of the junk food come from...we have inadvertently created a system where the cheapest calories in the supermarket are the least healthy.”

---Michael Pollan, 2017
DO FARM SUBSIDIES MAKE UNHEALTHY FOODS CHEAP?
**IT’S THE OPPOSITE:**

**Government Policies**

*Increase* the Price of...

<table>

Diets Have Not Worsened Because of Lower Access to Healthy Food

• 1970-2014:
  – Fresh fruit availability p/c increased 40 percent
  – Fresh vegetable availability p/c increased 21 percent
  – Fresh tomato availability p/c tripled and fresh broccoli availability p/c increased thirteen-fold
High Price of Healthy Food Not the Problem

- 1980-2006: Average retail price for healthy foods fell at same rate as for calorie-dense foods, once adjusted for inflation, quality, seasonality, according to USDA calculations
Annual Average Change in Inflation Adjusted Prices

APPLES vs CHOCOLATE CHIP COOKIES
LOW ACCESS TO SUPERMARKETS IS NOT THE PROBLEM
Unhealthy Eating Not Caused By Food Deserts

• **2011 study**: No connection found between grocery store access and healthful diets (*Archives of Internal Medicine*)

• **2014 study**: Low-income Americans enjoy a closer proximity to supermarkets than Americans who were not so poor (*Int’l Food and Ag Mgmt Review*)
The Real Problem: “Food Swamps”

- **Food Swamp**: “a neighborhood with at least four times as many fast-food restaurants and convenience stores compared to supermarkets and grocery stores.”

- Food swamps are a stronger predictor of obesity than food deserts

- The contribution of food deserts to obesity becomes statistically insignificant once you control for food swamps (*Int’l Journal of Env Research and Public Health 2017*)
Supermarkets Are Part of the Swamp

• **2018 RWJ Foundation study:**
  Only 30 percent of food company product offerings are healthy.

• **2019 Parker-Pope study:**
  Added sugars are found in nearly 70 percent of packaged foods today, including breads, yogurts, sauces, and even health foods.

• **2019 Northwestern University study:**
  Almost nine out of ten packaged food products are ultra-processed.
Pharmacies and Department Stores are also Part of the Swamp
• Irresponsible eaters? NO!

• Food companies? YES!

Companies design addictive foods:
• with too much added sugar, salt, and fat
• ultra-processed
• formulated to trigger the reward circuit in our brain
• heavily advertised, including to children
Advice to Farm Organizations and Agribusiness Companies

• Loosen your political alliance with food companies
• Reach out to public health and medical community
• Alter your message:
  – Stop stressing abundance, safety, choice
  – Start stressing nutrition and dietary health

Food and Farm Policies to Improve Americans’ Dietary Health

May 11, 2022

Michael F. Jacobson, PhD
Author, *Salt Wars: The Battle Over the Biggest Killer in the American Diet*
Co-founder, Center for Science in the Public Interest
Dietary Prescription for Improving Health

• Eat LESS sugar drinks, processed foods – *reduce obesity and prevent diabetes*

• Eat LESS saturated fat, cholesterol (meat, dairy) – *prevent heart attacks and strokes*

• Eat LESS salt – *prevent heart attacks and strokes*

• Eat LESS processed meat, alcohol – *prevent cancer of the colon, mouth, throat, breast, liver, colon*

• Eat MORE whole grains, beans, vegetables – *lower weight, lower blood cholesterol, etc.*
• Source: partially hydrogenated vegetable oil (PHO)

• 50,000-100,000 fatal heart attacks annually

• 8 billion pounds a year

• FDA ban in 2018

• Replaced with high-oleic canola and soy; palm oil
Chilean “High in Sodium” warning (similar ones for calories, sugar, saturated fat)

“High in Sodium” Products – change after labeling

- Cheeses 55% decrease
- Savory spreads 45% decrease
- Soups 11% decrease
- Sausages 64% decrease
Farm Policies to Reduce Cardiovascular Disease

- Encourage lower-fat cattle by tax/reward
- Reduce fat in milk through pricing incentives
Food Policies to Improve Health

• SNAP: bar use for sugar drinks; give bonus for fruit/vegetable purchases
• Healthier school breakfasts, lunches
• Healthier foods on government property
• Tax sugar drinks
• Limit the use of obesogenic pesticides, plastics, other synthetic chemicals

Food Systems & Human Truths:
How Cultural Forces are Reshaping Food Culture

Eve Turow-Paul
Eve Turow-Paul
What is the "why" behind today's biggest trends?
Introduction

Food Culture

84% Gen Z
86% Millenials
Passionate about food

Hungry Study
Back to Basics

What needs motivate human behavior?
How does our environment impact our abilities to meet these vital needs?
Human Needs Reflected in Food Trends

**CONTROL / ANXIETY**
- Transparent
- Simple
- Organic
- Natural
- Free-from
- Real
- Anti-GMO

**COMMUNITY / LONELINESS**
- Shared
- Communal
- Boutique
- Influencers
- "Likes"
- Diet tribes
- Co-living

**PURPOSE / POWERLESS**
- DIY
- Sourdough
- Coloring books
- Camping
- House plants
- Sustainable
- Farming

"LIKES"
Food has become a coping mechanism, a way to feed all of our well-being needs.
The pandemic has amplified many of these existing trends.
Post 2020 Food Trends

**CONTROL**

- Convenience
- Touchless
- Victory Gardens
- Immune-Boosting
- Comfort
- Less Food Waste
- Plant-Based

**COMMUNITY**

- Hashtag Communities
- Local Farm Shares
- Virtual Classes
- Tik Tok
- Sourdough
- Food Sovereignty
- Indigenous

**PURPOSE**

- Cooking
- Gardening
- Plant Parenthood
- Camping
- Regenerative
- Carbon Negative
Many of these trends connect directly with sustainability.
89% say they'd be "somewhat" or "very" interested in purchasing and eating foods that help their local community and farmland become more resilient to climate change.
So why is climate-smart food culture niche instead of the norm?
Mistaken Assumptions

• Most people don't care about the climate crisis.
• Most people don't like plant-forward eating.
• We have to talk about the climate to spark sustainable food trends.
It's All Connected

Sustainable Food Systems
(Plant-forward, regenerative, zero waste)

Farmland Resiliency
(Soil health, business diversification)

Nutrition
(Obesity, diabetes, heart disease)

Carbon Sequestration

Well-Being
(Control, community, purpose)
Caught In the Cycle

Farmers Farm What Will Bring in Income

Eaters Eat Based on Affordability, Accessibility & Values

Food Companies Make Products With Great Margins
How might we break out of this cycle to better support farmers and eaters?
Thank You
